BIOENERGETICS OF THE CELL: QUANTITATIVE ASPECTS

Drs. Valdur A. Saks, Renée Ventura-Clapier, Xavier Leverve, Michel Rigoulet and André Rossi, guest editors

Preface 1

What do we not know of cellular bioenergetics? – A general view on the state of the art 3–9

Part I: Bioenergetics of mitochondria: *In vitro* and *in vivo* studies

M.D. Brand: Top-down elasticity analysis and its application to energy metabolism in isolated mitochondria and intact cells 13–20

O.V. Demin, B.N. Kholodenko and V.P. Skulachev: A model of $O^{\cdot}_2^-$ generation in the complex III of the electron transport chain 21–33

M. Rigoulet, X. Leverve, E. Fontaine, R. Ouhabi and B. Guérin: Quantitative analysis of some mechanisms affecting the yield of oxidative phosphorylation: Dependence upon both fluxes and forces 35–52

X. Leverve, B. Sibille, A. Devin, M.-A. Piquet, P. Espié and M. Rigoulet: Oxidative phosphorylation in intact hepatocytes: Quantitative characterization of the mechanisms of change in efficiency and cellular consequences 53–65

N. Avéret, V. Fitton, O. Bunoust, M. Rigoulet and B. Guérin: Yeast mitochondrial metabolism: From *in vitro* to *in situ* quantitative study 67–79

V.A. Saks, V.I. Veksler, A.V. Kuznetsov, L. Kay, P. Sikk, T. Tiivel, L. Tranqui, J. Olivares, K. Winkler, F. Wiedemann and W.S. Kunz: Permeabilized cell and skinned fiber techniques in studies of mitochondrial function *in vivo* 81–100

L. Rappaport, P. Oliviero and J.L. Samuel: Cytoskeleton and mitochondrial morphology and function 101–105

A. Devin, P. Espié, B. Guérin and M. Rigoulet: Energetics of swelling in isolated hepatocytes: A comprehensive study 107–121

Part II: Energy transfer networks: Molecular physiology of kinases, lessons from transgenic mice, mathematical theories

U. Schlattner, M. Forstner, M. Eder, O. Stachowiak, K. Fritz-Wolf and T. Wallimann: Functional aspects of the X-ray structure of mitochondrial creatine kinase: A molecular physiology approach 125–140

O. Stachowiak, U. Schlattner, M. Dolder and T. Wallimann: Oligomeric state and membrane binding behaviour of creatine kinase isoenzymes: Implications for cellular function and mitochondrial structure 141–151

W. Qin, Z. Khuchua, J. Cheng, J. Boero, R.M. Payne and A.W. Strauss: Molecular characterization of the creatine kinases and some historical perspectives 153–167

P.P. Dzeja, R.J. Zeleznikar and N.D. Goldberg: Adenylate kinase: Kinetic behavior in intact cells indicates it is integral to multiple cellular processes 169–182

K. Steeghs, F. Oerlemans, A. de Haan, A. Heerschap, L. Verdoodt, M. de Bie, W. Ruitenbeek, A. Benders, C. Jost, J. van Deursen, P. Tullson, R. Terjung, P. Jap, W. Jacob, D. Pette and B. Wieringa: Cytoarchitectural and metabolic adaptations in muscles with mitochondrial and cytosolic creatine kinase deficiencies 183–194

K. Nicolay, F.A. van Dorsten, T. Reese, M.J. Kruiskamp, J.F. Gellerich and C.J.A.van Echteld: In situ measurements of creatine kinase flux by NMR. The lessons from bioengineered mice 195–208

M.K. Aliev, F.A. van Dorsten, M.G. Nederhoff, C.J.A. van Echteld, V. Veksler, K. Nicolay and V.A. Saks: Mathematical model of compartmentalized energy transfer: Its use for analysis and interpretation of ^{31}P-NMR studies of isolated heart of creatine kinase deficient mice 209–229

R. Ventura-Clapier, A. Kuznetsov, V. Veksler, E. Boehm and K. Anflous: Functional coupling of creatine kinases in muscles: Species and tissue specificity 231–247

G.J. Kemp, D.N. Manners, J.F. Clark, M.E. Bastin and G.K. Radda: Theoretical modelling of some spatial and temporal aspects of the mitochondrion/creatine kinase/myofibril system in muscle 249–289

V. Saks, P. Dos Santos, F.N. Gellerich and P. Diolez: Quantitative studies of enzyme-substrate compartmentation, functional coupling and metabolic channelling in muscle cells 291–307

Part III: Metabolic signalling and calcium: Regulation of mitochondrial oxidative phosphorylation *in vivo*

B.N. Kholodenko, J.M. Rohwer, M. Cascante and H.V. Westerhoff: Subtleties in control by metabolic channelling and enzyme organization 311–320

J.H.G.M. van Beek, X. Tian, C.J. Zuurbier, B. de Groot, C.J.A. van Echteld, M.H.J. Eijgelshoven and J.B. Hak: The dynamic regulation of myocardial oxidative phosphorylation: Analysis of the response time of oxygen consumption 321–344

B. Korzeniewski: Is it possible to predict any properties of oxidative phosphorylation in a theoretical way? 345–358

R.G. Hansford and D. Zorov: Role of mitochondrial calcium transport in the control of substrate oxidation 359–369

L.S. Jouaville, F. Ichas and J.-P. Mazat: Modulation of cell calcium signals by mitochondria 371–376

Part IV: Bioenergetics in medicine

F. Di Lisa and P. Bernardi: Mitochondrial function as a determinant of recovery or death in cell response to injury 379–391

I.E. Hassinen, K.H. Vuorinen, K. Ylitalo and A. Ala-Rämi: Role of cellular energetics in ischemia-reperfusion and ischemic preconditioning of myocardium 393–400

A. Rossi, L. Kay and V. Saks: Early ischemia-induced alterations of the outer mitochondrial membrane and the intermembrane space: A potential cause for altered energy transfer in cardiac muscle? 401–408

T. Letellier, M. Malgat, R. Rossignol and J.-P. Mazat: Metabolic control analysis and mitochondrial pathologies 409–417

E.K. Seppet, A. Kaasik, A. Minajeva, K. Paju, J.J. Ohisalo, R. Vetter and U. Braun: Mechanisms of thyroid hormone control over sensitivity and maximal contractile responsiveness to β-adrenergic agonists in atria 419–426

M.L. Guerrero-Ontiveros and T. Wallimann: Creatine supplementation in health and disease. Effects of chronic creatine ingestion *in vivo*: Down-regulation of the expression of creatine transporter isoforms in skeletal muscle 427–437

S. Neubauer, M. Horn, D. Hahn and K. Kochsiek: Clinical cardiac magnetic resonance spectroscopy – present state and future directions 439–443

B. Beauvoit and B. Chance: Time-Resolved Spectroscopy of mitochondria, cells and tissues under normal and pathological conditions 445–455
